Custom display systems

In many cases, only a single line of characters has to be displayed to call customers and there is no need for a complete queueing system. With its custom display systems, MULTIMEX has the answer to this problem too.

Often, a complete, number-based queueing management system is not necessary and a custom-made display system that presents numbers or characters on 7-segment or LCD surfaces would suffice. Such applications include one-line systems used at ticket offices, custom cashier queueing systems or the display systems used in doctors' offices (where patients are identified by a few digits of their social security number or a unique code) as well as outdoor vehicle queueing systems.

Solutions offered by MULTIMEX

- displays with a variable number of characters, in custom sizes and designs (7-segment or dot-matrix)
- custom LCD display systems
- physical barrier solutions
- custom stand-alone or integrated control software
