

## MXLCD displays

The LCD displays offered by Multimex in different sizes allow for the presentation of various contents edited in the Q-MONITOR multimedia (DMS) module. The greatest advantage of LCD displays is that they combine the functions of call number display and that of providing information.

Our clients are offered the products of well-known international manufacturers (LG, SAMSUNG) in excellent quality yet at favourable prices. LCD displays can be mounted on walls, ceilings, but stand-alone floor versions and custom console-mounted products are also available.

By adding various accessories to the LCD displays (LCD controller PCs, built-in controllers, signal distribution and converter devices) clients can easily build their optimal multimedia system that satisfies all needs.
